

# REPORT

- **Exercise3**

In this exercise, it is requested to implement the same solution of the previous exercise, but replacing the system call `execvp()` with the system call `execv()`. The only difference between the two system calls is the way of how the parameters are passed.

```
execvp("sort" , "mysort", "-n", "-o", path, path, (char *) NULL);
```

```
execv("/usr/bin/sort", (char *[]){"/usr/bin/sort", "-n", "-o", path, path, (char*) NULL});
```
